AutoLISP and AutoCAD Scripting AutoLISP is a software development language for use with AutoCAD. Unlike the Visual LISP language, AutoLISP has a scripting dialect. It is primarily used to automate procedures in AutoCAD. AutoCAD Scripting is a .NET software development tool that allows users to create AutoLISP files in Visual Studio .NET or create Visual Basic scripts directly in AutoCAD itself. AutoCAD Function Sets and Function Extension Packs AutoCAD Function Sets (previously known as AutoLISP Function Sets) are a group of AutoLISP scripts which provide certain AutoCAD functions. They are released in a set, usually with all the scripts contained on one CD. Function Packs are similar to Function Sets, except that they only contain the .NET scripts and some of the interface elements are hidden. Function Packs do not support sub-packages and are only intended to be distributed as a single standalone application. Function Packs were previously known as Dynamic Function Packs, and they can be used to easily integrate AutoCAD into a web application. Visual LISP AutoCAD 2007 and earlier versions had support for Visual LISP (VLP). VLP is a very lightweight language that may be used to automate procedures. It is similar to AutoLISP but does not support the scripting language. Visual LISP was an application programming interface (API) provided by Autodesk. The Visual LISP API was subsequently closed. The API was never released as an open source project, but the Visual LISP scripts for the API are available at the Autodesk Developer Network. AutoCAD 2008 added support for VBA macros. VBA macros are much more powerful than Visual LISP, but are limited to the Windows operating system. AutoCAD 2013 is the first version to not support Visual LISP, and all future releases will use the API and VBA. VBA and .NET AutoCAD 2013 introduced support for programming in Visual Basic (VBA) and .NET. Like the Visual LISP APIs, VBA and .NET are still based on the ObjectARX API and are thus subject to the restrictions of that API. AutoCAD Architecture AutoCAD Architecture is an add-on for AutoCAD that allows users to model an infrastructure (transportation system a1d647c40b
