who uses Android for your smartphone then you might not be quite aware of all the products available in the marketplace. In this article, you will learn about all the Android-powered phones available on the market today. The fastest selling brand of Android phones is Samsung. Today, the company is the world's biggest mobile phone producer and it owns a great deal of patents. Samsung's phones come in different sizes and have various features. Some of these phones even have some of the functions of the iPhone. Most of the Android phones have a touch-screen interface, but some of them have resistive or sensitive touch screens.

Autopano Giga 'Mac/PC' version brings you the ability of processing gigapixel images up to 300 megapixels, while the 'Mac/PC' version features an intuitive interface. The program is fairly simple to understand and handle, even for the more inexperienced, enabling you to launch it immediately after installation and begin working with it. However, you will need to explore its various functions and tools before you can produce the results you would like. Autopano Giga enables you to process images of up to 30 megapixels in a matter of minutes, making it a useful tool for professional and amateur

photographers alike, producing professional panoramic photos from a variety of sources. The program features a lot of powerful tools that help you create the best panoramic photos from your images. After you have selected your source photos, you can choose to auto-crop them, after which it is possible to create a panorama picture from the resulting images by setting the value of the panoramic factor. You can then click on 'Align and Join' and the program will start generating a panoramic image based on the collected and combined keypoints, capturing even the most complicated structures or objects in the scene. Autopano Giga allows

you to add a 'ghost' image of the source image, meaning you can use it in conjunction with other photos, without losing the spatial quality of the final panoramic image. You can decide whether to use 'Global Align' or 'Auto Align'. Moreover, you can easily add a 'Grid' in which you can define the location of the panoramic picture, and make it 'White Balance', choose the correct exposure for the final photo, and more. Autopano Giga also has a 'New Wave' tool that permits you to improve the spatial quality of your panoramic picture, enabling you to create sharper images. Additionally, the program features a 'Batch Renderer' that

enables you to add several projects and generate panoramic pictures in just a few clicks, exporting the results within moments. To conclude, Autopano Giga is an advanced yet simple utility developed to offer you the ability of generating gigapixel images from multiple sources, resulting in high-quality panoramic photos. Description: Autopano Giga 'Mac/PC' version enables you to process images of up to 30 megapixels in a matter of minutes, making it a useful tool for professional
